

# **DesensiMAX – Desensitizing / Rewetting / Bond Degradation Preventer**

## **DesensiMAX – Desensitizing / Rewetting / Bond Degradation Preventer**

4.6

**DesensiMAX** (formerly BondSaver D) has been formulated to be used with total etch and selective etch adhesive systems along with the treatment of sensitivity resulting from exposed dentin (\*).

Easy to apply, no drying, no rinsing, no scrubbing... simply apply and move on in your protocol.

**DesensiMAX belongs under every restoration placed.**

**DesensiMAX has been formulated to provide these significant benefits :**

- **Eliminates sensitivity INSTANTLY**
- **Rewets the tooth surface to provide optimal moisture levels for bonding**
- **Disinfects with antimicrobial agents including Chlorhexidine**
- **Provides fluoride at the restorative-tooth interface**
- **Inhibits MMPs, giving you better bond longevity**
  - **The ONLY desensitizer that stop the generation of naturally occurring matrix metalloproteinase (MMPs) which may degrade bond strengths over time**

(\*) If using with a single bottle adhesive in strict self-etch mode (no etching) or with a resin modified glass ionomer, the BondSaver product should be used in place of DesensiMAX

**MANUFACTURED BY**
