

RE-GEN FLOWABLE COMPOSITE

RE-GEN™ Flowable Composite

RE-GEN™ Flowable composite is formulated with a unique combination of thickness and flow in the same material. RE-GEN™ Flowable Composite provides unsurpassed strength and toughness while offering a high level of radiopacity. The use of Bioglass within this material promotes the regeneration of hydroxyapatite and provides antimicrobial function to prevent recurrent caries and secondary decay. These features improve the longevity and overall performance of the restoration.

- Releases calcium, phosphate, and fluoride to maximize the potential for remineralization of tooth structure
- Exceptional radiopacity < 300%
- Unsurpassed compressive strength of 357 MPa
- High modulus material provides a strong foundation within direct restorations
- Contains No Bis-GMA, No Bisphenol A, No BPA derivatives
