

VIEWING SYSTEMS

High quality x-ray film lightbox systems

Quality x-ray film viewers to suit every professional need. Velopex viewing systems have been developed specifically for dental and veterinary applications. They offer levels of quality and performance superior to ordinary lightboxes, and provide the bright, uniform, glare-free illumination that enable details of potentially crucial diagnostic significance to be examined in comfort. Wide choice of sizes for wall mounting or free standing use. Uniform illumination for accurate examination of radiographs of all sizes. Hi-Lite Viewer comes with tracked magnifier. Multiple Screen Super Viewers can be used for side-by-side comparison of radiographs and the Slim Line Viewers offer choice of mains or battery operation.

Velopex Hi-Lite Viewer

A slim lightbox for all dental film sizes from intra-oral to panoramic, with excellent illumination to the extreme edges of the viewing area. Continuous film clips run along the top and bottom of the screen, and the standard tube is inexpensive and easy to change. The Hi-Lite can be wall mounted or free standing, and is also ideal for recessing into cabinetry for a clear, streamlined look. A tracked magnifier is standard.

Velopex Super Viewer, Single Screen

A compact, robustly built viewer large enough to accommodate a full size medical x-ray film. It incorporates a circular fluorescent tube for strong and even illumination, and a simple drop-roller device holds the films secure and allows easy insertion of films of any size. The Super Viewer can be wall mounted. It may also be used laid flat if required for surface work, e.g. tracing.

Velopex Super Viewer, Double Screen

Ideal for the busy practice, this double size lightbox has all the attributes of the single screen Super Viewer but with twice the viewing space.* It incorporates two tubes with independent switching. This viewer is particularly convenient for comparing radiographs, as its continuous screen allows large-format films to be examined side-by-side without a central obstruction.

Velopex Slim Line LP400

This flat-screen viewer offers a generous viewing area for intra-oral and panoramic dental x-ray films, yet is a mere 25mm (1 inch) high. With its ultra-slim profile, it is ideal for wall mounting or free standing use, flat or tilted on props. The robustly constructed LP400 has twin fluorescent lamps for efficient illumination.

Velopex Slim Line LP100

For dentists requiring a low cost viewer for intra-oral films that occupies minimal counter space, the LP100 is the solution. This compact, unobtrusive flat-screen lightbox provides high quality illumination, with the option of mains or battery operation.

VIEWING SYSTEMS

High quality x-ray film lightbox systems

DIMENSIONS:

327 x 210 x 60.5mm (12" x 8" x 2½")

VIEWING AREA:

320 x 150mm (12" x 5")

POWER SUPPLY:

220v 50Hz

FLUORESCENT TUBES:

300mm x 8w Daylight; electronic choke for instant illumination

CASE CONSTRUCTION:

Neutral white plastic finish

WEIGHT:

1.13Kg (2.5 lbs)

DIMENSIONS:

425 x 400 x 120mm (16¾" x 15¾" x 4¾")

POWER SUPPLY:

30v 50Hz

POWER SUPPLY:

Circular 65W

CASE CONSTRUCTION:

Steel, finished in stove-enamel white with polished, stainless steel screen surround

DIMENSIONS:

425 x 800 x 120mm (16¾" x 31½" x 4¾")

POWER SUPPLY:

30v 50Hz

FLUORESCENT TUBES:

2 X Circular 65W

CASE CONSTRUCTION:

Steel, finished in stove-enamel white with polished, stainless steel screen surround
